CINCINNATI,

Ohio.

Western Methodist Book Concern.

Explanation of Tables.

Explanation of Tables.

THE Tables are arranged one month to a page.

The first column shows the day of the month.

The second column shows the number of each day throughout the year.

The third column is a continuation of the number through a second year, by which can be ascertained the number of days between any two dates from January 1st of one year to December 31st of a succeeding year.

The four succeeding columns show respectively the date of maturity, with grace, of a Note, Draft, or Bill of Exchange when given for 30, 60, 90, or 120 days.

It will be observed that on either side of the name of each month is a number.

The one on the left side is the number of the month in the year; the one on the right side is a continuation of the numbers through a second year.

The accountant will soon become familiar with the numbers of each month, making continual reference unnecessary, and doing away with the old plan of counting months on the fingers-end. See Examples 5 and 6.

EXAMPLES.

EXAMPLE 1. To find the number of days between February 2d and October 3d of the *same year*,

Turn to October; find 3 in the *date* column, opposite which, in the *first year* column, you see 276.

Then turn to February; find 2 in the *date* column, opposite which, in the *first year* column you see 33, which deducted from 276 gives 243, the number of days between the two dates.

Solution.

October 3d,	. .	276
February 2d,	.	33
		30)243 difference in days.
		8 months 3 days.

Reduced to months by dividing by 30, gives 8 months 3 days.

EXAMPLE 2. To find the number of days between October 3d of *one year* and February 2d of the *next year*,

Turn to February; find 2 in the *date* column, opposite which, in the *second year* column, you see 398.

Then turn to October; find 3 in the *date* column, opposite

which, in the *first year* column, you see 276, which deducted from 398 gives 122, the number of days between the two dates.

Solution.

February 2d,	398	second year column;
October 3d,	276	first year column;
	30)122	difference in days;

Reduced to months, as in Exam. 1, gives 4 months 2 days.

EXAMPLE 3. To find when a Note, Draft, or Bill of Exchange, dated August 7th, given for 30, 60, 90, or 120 days, will mature,

Turn to August; find 7 in the *date* column, opposite which, in the respective columns, will be found, with grace, the date of maturity, as follows: 30 days, 6–9 September; 60 days, 6–9 October; 90 days, 5–8 November; 120 days, 5–8 December.

EXAMPLE 4. To find when a Note, Draft, or Bill of Exchange, dated August 7th, given for a number of days not specified in the Tables, (say 42,) will mature

Find the difference between the number of days for which the paper is given (42) and the highest number of days specified in the Tables which it exceeds (30); add this difference (12) to the number representing the date of the paper (7), which gives (19) a new date, opposite which, in the column of the number of days exceeded (30), will be found 18–21 September, the date of maturity.

When paper is made payable a given number of *days* after date, the *actual number of days* must be counted without regard to the months.

EXAMPLE 5. To find when a Note, Draft, or Bill of Exchange, dated May 7th, given for 6 months, will mature,

Turn to May; its number as a month is 5; add 6 (the time), and you have 11, being November. The date being the 7th, and the even months being counted, the paper will mature on the 7th; grace added, gives 7–10 November.

EXAMPLE 6. To find when a Note, Draft, or Bill of Exchange, dated May 7th, given for 16 months, will mature,

Turn to May; its number as a month is 5; add 16 (the time), and you have 21, being second year number of September. The date being the 7th, and the even months being counted, the paper will mature on the 7th; grace added, gives 7–10 September of the year succeeding the one in which the Note is given.

When paper is made payable a given number of *months* after date, *count the months* without regard to the number of days in each.

NOTE.—The above examples are given simply to show the principle of the months being numbered. It is easily seen that, being familiar with the numbers of the months, a result by a mental addition will be equally correct, and much quicker reached than by any other method.

Leap Year.

Explanation.

IN order to a proper understanding and use of the Leap-Year Tables, it must be supposed that the last six months of the Leap Year belong to the year next preceding Leap Year, or that all years are Leap Years.

It must be remembered, too, that except where February 29th is included in the time given, the maturity will be the same in either year.

Then in July of the year next preceding Leap Year commence to use the July month of the Leap-Year Tables. After the first of March in Leap Year is passed return to the Ordinary Year Tables.

EXAMPLE. When will a Note dated December 22, 1871, given for 69 days, mature?

1871 is the year next preceding 1872, a Leap Year. The month being December, we will have already commenced to use the Leap-Year Tables. The highest number specified which 69 exceeds is 60. The difference (9) added to the number representing the date (22) gives 31, a new date, opposite which, in the column of the number of days exceeded (60), we have 29–3 March, the date of maturity.

Solution.

Time, 69 days.
60 heads column exceeded by time.

9
22, date added.

31, new date,

Opposite which, in 60-day column, we have 29–3 March.
